

Expanding overseas with Perkins-power solutions

HYTEC Baumaschinen GmbH is the German leader in the production of loaders and backhoes in its class and segment. HYTEC Baumaschinen GmbH has two world-class production facilities. Our company can boast of the most modern production facilities, the most professional staff as well as high-quality services, which are always at the service of our customers.

Our construction machinery and equipment factory has a capacity of 5,000 vehicles per year. We continue to invest in new facilities and improve our global sales and service network.

Spare parts

Guaranteed supply of spare parts: In our Hytec plant in Mecklenburg-Western Pomerania, we always have around 2,500 spare parts in stock! If a spare part is not in stock, we will procure it immediately!

Inspection of the wheel loaders, mini excavators and machines is possible at any time after prior consultation. We would be happy to explain the advantages of our wheel loaders and other products to you in a personal meeting.

Perkins power

Focused on HYTEC Machine's HD100 4WD, 100 hp (75 kW) backhoe loader, the work to install and optimise the Perkins 1104D-44TA involved detailed technical engagement between the parties and an application study.

The turbocharged 1104D-44TA delivers 410 nm at 1400 rpm and offers the best combination of power delivery and response. It is reliable and easy to maintain with 500-hour

service intervals and single side service components, for ease of end user servicing and has been powering HYTEC Machine's FM100 4WD backhoe loader since 2023.

Transport

We can organize and carry out the wheel loader transport for you throughout Europe. For an offer or questions, do not hesitate and contact us by email at info@hytec-baumaschinen.de or go directly to one of our wheel loader dealers.

"The engine manufacturer had to be of international repute and presence. Perkins has proved to be the right choice for us because of their international presence and world class products."

Mr. Blanck Udo
managing director

The turbocharged Perkins 1104D-44TA offers the best combination of power delivery and response and is reliable and easy to maintain with 500-hour service intervals and single side service components, for ease of end user servicing.
